Full-height rotor turnstiles

for arrangement of checkpoints with increased security requirements

Complete overlap of
the passage zone

«Lock-chamber»
Mode

Weatherproof
design

PERCo full-height rotor turnstiles provide reliable overlap of the passage zone, which allows them to be used at facilities with increased security requirements.

Due to corrosion resistance, full-height turnstiles and swing gates can be operated both indoors and outdoors. A canopy protects against direct precipitation and ingress through the top of the turnstile. The foundation frame allows simplifying the installation and improve its quality.

Supplementing the turnstiles with full-height gates helps to arrange the transportation of bulky goods. The gates are made in a single design with turnstiles and allow you to arrange the passageway zone. Double passage full-height turnstiles allow organizing two controlled passages within a limited space.
